

Your Bird's Daily Diet

A simple guide to building a balanced daily bowl.

Fresh water

Replace drinking water every day, and sooner if food or droppings enter the bowl. Wash bowls thoroughly.

Vegetables and chop

Offer a varied mix of bird-safe vegetables. Rotate colours and textures, remove uneaten fresh food after a few hours.

Quality base diet

Use the weaning diet recommended for your baby. Make any food changes gradually to avoid a bird refusing unfamiliar food.

Treats in moderation

Millet, sunflower seeds and fruit can be useful rewards, but should not make up the majority of the diet.

BABY BEAKS TIP

Ask us what your baby is currently eating before collection so you can have the same foods ready at home.
